

Top 5 Reasons To Choose Jabra BIZ 1500 MONO QD and Jabra BIZ 2300 Series

Jabra is a top market company which is well known for its products and technology. It has advanced the microphones and speakers and given us a new way to look at it.

They now no more serve just the purpose of making regular calls but with all these advancements, they fit perfectly in call centres and even at airports where you cannot afford the sound to lack.

They were one of the first companies to start working on this field of sound and entertainment and now they're more focused on producing professional materials for use and sale.

Jabra BIZ 1500 MONO QD

The main reasons to choose Jabra BIZ 1500 are:

1. Peakstop
2. Crystal Clear Sound
3. Simple call management
4. HD audio
5. Jabra Xpress

Peakstop

Peakstop is a feature which doesn't let harmful sounds approach your ear. It already blocks all the sounds above the frequency of 180 dB and all other kinds of harsh noises from the background that can disturb the call or can affect your ears in any way.

In a call, there can be a lot of loud noises and disturbances which slowly start to affect your hearing. It can be coming from the other end of the call or there might be some problem with the connection or some other issue.

These headphones protect your ears against these noises and produce good quality of sound for your ears so you can work in peace and in a safe environment.

The people who work in a call centre or spend a lot of time on calls have a high risk of getting ear related diseases due to high pitched noises or weird disturbances from behind.

Peakstop puts a stop over them all and enables you to do your job without any risk of permanent personal damage.

Crystal Clear Sound

Sound quality is what matters the most in headphones. In commercial use headphones, the bass and other features can matter more but while we are talking to someone, it is important that we hear their voice clearly.

On professional calls, it is important to note everything that the other person says without having any other disturbances. You can hear the other person totally clear through these headphones without any lack of sound.

Simple Call Management

You can easily manage your calls from its control box. You can mute, end, or start new calls. You can also easily adjust the volume from your headphones easily. This feature enables you to easily take control over all your incoming and ongoing calls. You don't have to click on the desktop over and over again, instead, you can easily control everything from your headphones only.

This feature is available only in a few headphones and is an important one. It can be very much tiring to answer all the calls by again and again clicking on the desktop or while you're roaming all around your shop, you then have to come back to your desktop so you can receive the next call. You can easily avoid all this by simply having the headphones which can assist you with this.

HD Audio

HD audio helps you listen to your customers clearly. HD Audio is always more suitable for professional reasons as you can understand the other person more clearly and you without any trouble, answer them.

It helps you focus more and doesn't let you get tired too quick. When we have to listen to someone carefully because of the quality of the sound, our job, no matter how easy it is, can start getting irritating and tiring to us.

HD audio is what makes it interesting again and doesn't let us get tired too quick as the work matter to all of us.

Jabra Express

Jabra Xpress allows you to download many different features on your headphones to make the quality of your sound and calls better. It keeps uploading many new features and you can download them on your headphones.

These upgrades can be for the quality of sound or the way you assemble your calls.

They also come at a really affordable price. With all these great features, you can get these headphones for only \$65.

[Jabra BIZ 2300 Series](#)

[Jabra BIZ 2300](#) has a lot of benefits and many features which makes it different from others.

It has been developed by keeping call centres and agents in mind and it has been designed to specifically fulfill their needs.

It has been built to last for a long time and to give the best calling experience possible.

The main specifications that make it different from others are:

1. Light weight
2. Reinforced Cord
3. Free spin
4. Noise Cancelling Microphone
5. HD voice

Light Weight

When you work in a call centre, or in a place where you have to wear these headphones all the time and keep taking new calls, if the headphones are heavy, you would just keep feeling like there is a burden on your head all the time.

To reduce that, we suggest that you use headphones that have less weight and work the same. It would keep you from getting tired really quick and you would be able to focus on work more. You wouldn't have to keep sitting there feeling like you have something really heavy on your head which keeps weighing you down. These headphones weigh just 49 grams in the mono and 63 grams in the duo version.

This is a really big plus point and only the ones who keep wearing them everyday understand how important it can be for them to have less weight on their head so they don't feel something on their head all the time and can talk without any problem and out in the real effort in working and talking instead of trying to fix their headphones all the time.

Reinforced Cable

These headphones are built to last a long period of time and which is why they come with reinforced cables which are being built to withstand the office environment which involves the revolving chairs which can tangle the wires and get them to break.

But these wires are built specially to handle such sort of stress under different situations. Now even if you walk away from your desk while still wearing your headphones, you wouldn't have to worry about them breaking as the wires are strong enough to handle it.

They can also be used around the sharp objects which are pretty common in offices. They can take stress and can also be in their original state even after being exposed to sharp objects in their surroundings.

Free Spin

Free spin enables you to easily rotate the boom arm up to 360 degrees without worrying about it breaking either.

They are the perfect purchase if you want your headphones to last a long time. You can easily rotate them in any position to adjust them the way you want and work easily.

They can easily rotate in any position and you don't have to worry about breaking them at any point while you're trying to adjust them according to your need.

Breaking is a different story; free spin even doesn't let them get damaged from any point. It protects your headphones and also lets you freely speak in any position and adjust them the way you want so you don't keep sitting in a particular position where the other person can at least hear you. You do not only have the freedom of speech in this, but also the freedom of the way you want to sit and speak.

Noise Cancelling Microphone

Noise cancelling microphones help the person on the other end of call hear you clearly. They cancel all the extra sounds from the background and only deliver the speech that you're saying. This happens due to less sensitivity of the mics. They are not sensitive enough to capture the sound from large distances but they capture it from the nearby.

The person on the other end doesn't listen to all the other people talking in the background or the machines running. Except, they focus more on what you've got to say. This technique was introduced by Jabra in the market and has been featured in many of its headphones. It makes you sound more professional and the other person then also wants to listen to you.

HD Voice

HD voice lets you listen to the person on the other end clearly and gets your interest. You don't get tired of working too quickly and you can talk more with more people and effectively. HD voices are not featured in a lot of headphones by the other companies but it is the main feature when it comes to professionalism.

No one wants to keep focusing on what the other person is saying or make them repeat it all again and again. It is then preferred to use the headphones with HD voice so you can hear them clearly on the first time.
